

ianwebstertx@gmail.com

512-466-1980

Dallas TX

Technical Skills

- Programming Proficiencies: Java, JavaScript/TypeScript, React, Node.js, C++, C#, Python, SwiftUI, SQL, AWS
- Cross-functional collaboration
- 3D/Design Tools: Blender, Maya, Figma, Adobe Photoshop, Illustrator, Lightroom, TouchDesigner
- XR Development: Unreal Engine 5, Unity Game Engine, Rokoko Studio

Education

08/2024

Southern Methodist University

Dallas, TX

Bachelor of Arts:

Computer Science, *Lyle School of Engineering*

Creative Computing, *Meadows School of the Arts*

Ian Webster

Summary

Dynamic Software Developer with hands-on experience at Green Lounge TV, focused on creating cutting-edge XR experiences with Unreal Engine 5. Proficient in Java and C++, with a strong foundation in real-time application performance optimization and high-fidelity visual development. Skilled in project management and cross-functional team collaboration, consistently delivering immersive, user-centered solutions.

Experience

Green Lounge TV - Software Developer

11/2024 - Current

- Developing an immersive VR service bay experience for Toyota (Unreal Engine 5), focusing on 3D UX interactivity, physics, and Meta Quest optimization
- Engineering controller-based interactions and real-time rendering pipelines (C++), ensuring high-fidelity visuals and performance
- Deployed builds to standalone Quest headsets and PCs, showcasing the project at NADA 2025

SMU Radio Frequency - Full Stack Web Developer

10/2024 - 12/2024

- Spearheaded website redesign (React/Node.js), enhancing UI/UX navigation flow
- Integrated real-time features including live audio streaming and chat, collaborating with radio staff for seamless broadcasting utilizing Mixlr and Spotify API (JavaScript)
- Improved web traffic by conducting A/B testing and user feedback sessions to refine design

SMU Human and Machine Intelligence Game Lab - Software Developer (Game Research)

Dallas, TX

11/2022 - 09/2023

- Built a custom Minecraft plugin to teach resource management, integrating a state machine for player progression tracking (Java)
- Led a two-week pilot study, managing tasks for the development team, lesson plans, and video analytics for research
- Designed a system to log player metrics (Java/SQL) such as completion times and backtrack errors to analyze learning patterns of players

Projects

VR/AR - Passive Haptic Controller

- Integrated a repurposed arcade controller as a novel approach to XR interactions using a Meta Quest 2 (Unity Engine)
- Implemented hand tracking and calibration system (C#) to recreate the physical controller in a virtual environment, creating a unique sense of immersion
- Applied the technology to vehicle simulations, such as a crane and tractor
